

LEAF BASICS QUIZ

Here are a few questions for you to go through, think about and test what you've learned. Remember, you can find all the answers in the "Leaf morphology" article or in the "Why do plants (not) have leaves?" video.

- What is the stalk attaching the leaf to the stem called?

- Where is the leaf apex located?

- In botany, what do we call the edge of the leaf blade?

- Where can you find stipules?

- What is a sessile leaf?

- What is the upper side of a leaf called?

- In Latin, does "ab" as in the word "abaxial" mean away or towards?

- Do all plants have leaves?

- What is the main function of a leaf?

- What leaf features are important for plant identification? Give a few examples.

- What is the type of leaf that is composed of multiple leaflets called?

Name the leaf parts that the arrows point to.
